NON-LIFE AND LIFE PREMIUMS EVOLUTION IN GROSS WRITTEN PREMIUMS (€M)

- Increase of Non-Life premiums by 1.6%
- +2% in Public & Corporate thanks to growth in Worker's compensation (+12%) and Fire (+5%) but decrease in Car (-6%)
- +1% in Retail coming from increase in Fire (3%) as well as in Car (1%).

• Increase in Life +1.9% mainly due to 2nd pillar

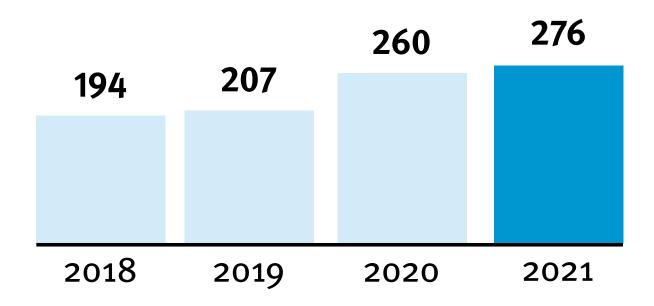

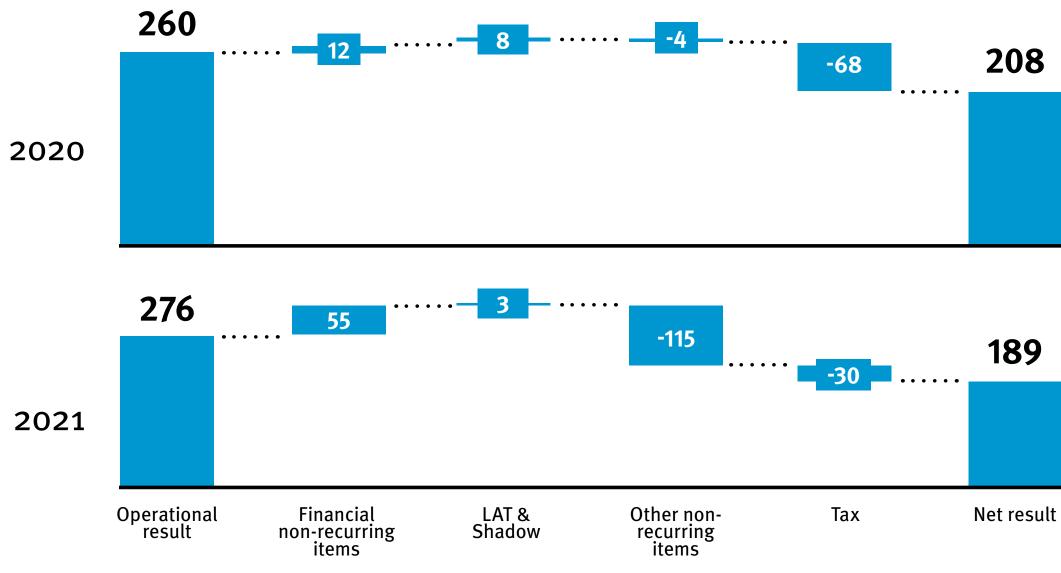

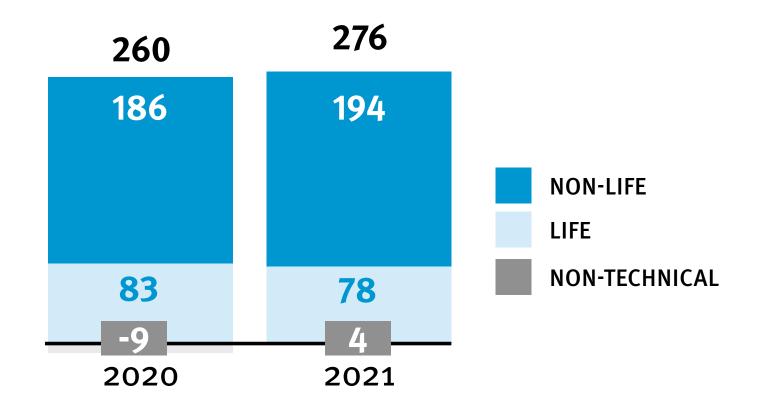

OPERATIONAL RESULT EVOLUTION IN OPERATIONAL RESULT* (M€)

* Part of the group

FROM OPERATIONAL RESULT TO NET RESULT (M€)

- The **operational result** amounts to **276 M€** which is higher than last year (+16 M€).
- the main contributor remains Non-Life : 194 M€
- while the Life activity accounts for **78** M€.
- The performance in Non-Life (operational result +8 M€) was stronger due to:
- no significant impact of storms in 2021 (compared to 2020) and reversal of provisions to reach the target VAR;
- partially compensated by floods and no significant positive impact of Covid 19 crisis (compared to 2020).
- The performance in Life (operational result -5 M€) slightly decreases.
- The net result decreases from 208 M€ to 189 M€ mainly due to a higher negative impact of **other non-recurring items (-111 M€)**, partially offset by the increase of operational result (+16 M€), the increase of non-recurring financial revenues (+44 M€) and the decrease of tax charges (-38 M€).

OWN FUNDS AND LEVERAGE

OWN FUNDS

The IFRS own funds (part of the group) increased slightly between end-December 2020 and end-December 2021 as a result of :

- the net result of the period (+189 M€): 158 M€ from Ethias SA and 31 M€ from consolidation adjustments and Subsidiaries' contribution;
- the dividend attributed to the shareholders (-103 M€);
- the change in other equity items (-81 M€)
- Ethias SA Solo (-46 M€)
- Consolidation adjustments and Subsidiaries' contribution (-35 M€): mainly the cancellation of IFRS adjustments in Ethias SA solo.

LEVERAGE

The financial leverage ratio decreased in 2021 due to the decrease in short term debts.

| Total w/o IAS 19 | | | (0.03) | | | 0.34 |
| Total with IAS 19 | | | (0.28) | | | 0.09 |

- The own funds are now (very slightly) exposed positively to a decrease of the interest rates given the nearly closed duration gap.
- The actions taken in the last couple of years led to reduce Life's duration gap, especially thanks to our long term investments and the implementation of our repo's strategy and our swaps hedging program.
- The non life duration gap is positively impacted by the higher increase of the long term swap rates in contrast with the lower increase of short term swap rates, and by long term investments.
- The average duration gap in Life and Non Life portfolios are now positive.
- The duration gap including IAS 19 provisions is close to o.

• The sensitivity of own funds to a change in EIOPA interest rates is under control and does not present a major risk, as shown in the solvency ratio's sensitivities to market factors.

ELIGIBLE OWN FUNDS FOR MCR COVERAGE IN M€

The decrease of the solvency ratio is explained by:

- **-11%** explained by the dramatic July 2021 floods
- -8% due to the continuous rise of inflation over 2021.
- +6% net impact from the persistent low spread environment
- +5% net effect of the increase of interest rates and the positive impact on technical SCRs
- +4% generated by equity exposures and the favorable market conditions balancing the increase of the equity SCR.
- +3% coming from real estate portfolio thanks to several revaluations and the realization of gains through several sales.
- -7% due to the provisional dividend for 2021

QUALITY OF SOLVENCY II CAPITAL MCR

Very high quality capital structure: Unrestricted Tier 1 SCR coverage > 100%

- **Restricted Tier 1** and **Tier 2** are subordinated loans
- Tier 3 is composed of deferred tax assets
- SCR coverage: all available own funds are eligible
- MCR coverage: the eligibility limit is reached for Tier 2

Strong capital structure with high percentage of Tier 1

- SCR: Tier 1 represents 75% of own funds end 2021 (stable)
- MCR: Tier 1 represents 93% of own funds end 2021 (same as end 2020)

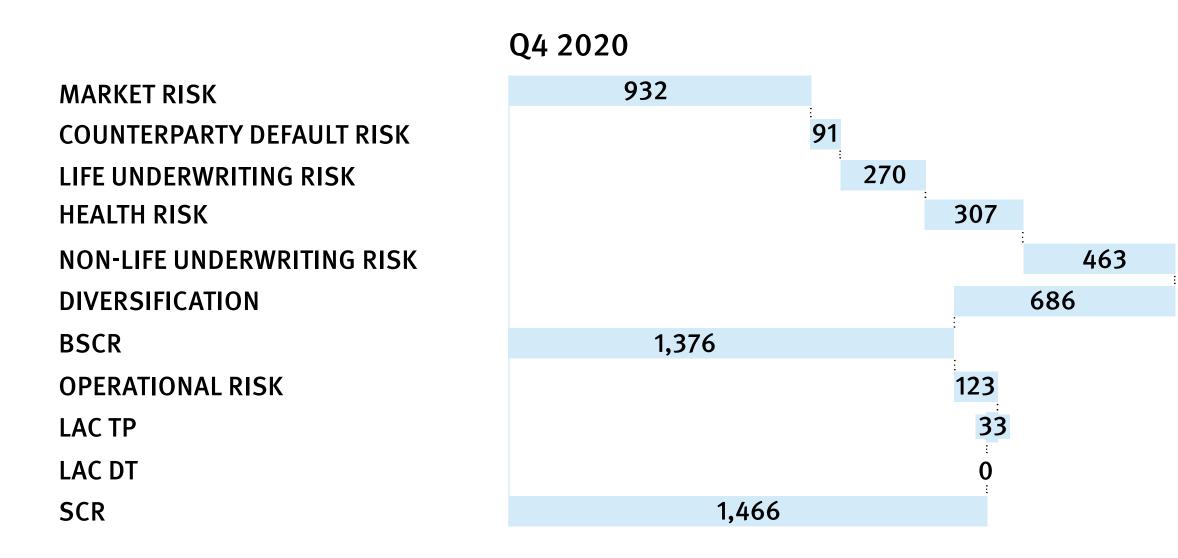

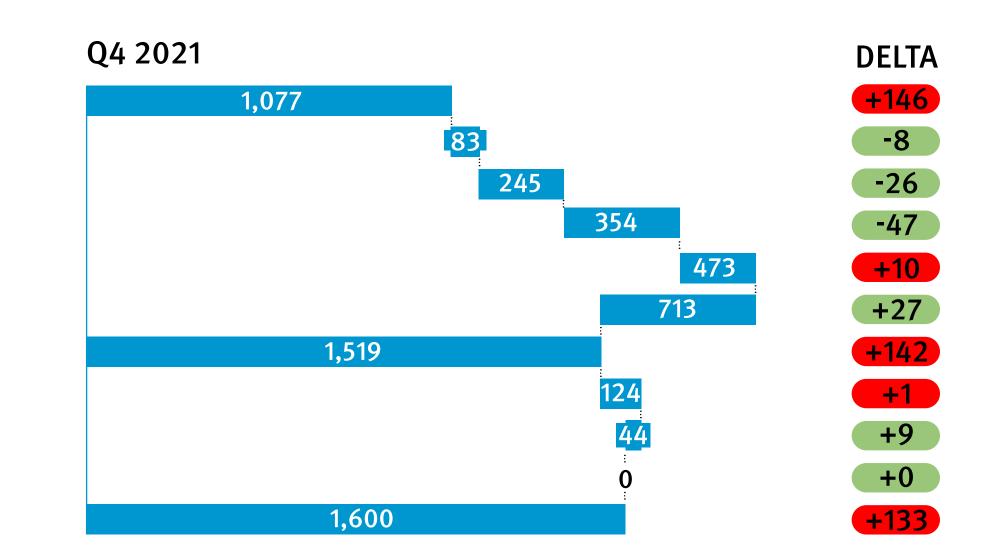

BREAKDOWN OF SOLVENCY CAPITAL REQUIREMENT THE SCR INCREASED BY 133 M€ BETWEEN DECEMBER 2020 AND DECEMBER 2021

- Increase in market risk is mostly driven by the SCR Equity, which strongly increased over 2021. This is explained by Ethias's evolution towards a strategic asset allocation with more shares, but also by the favourable equity market. Besides, the symmetric adjustment has also increased over 2021 (from -0,4% to 6,9%).
- Counterparty default risk decreases as the negative impacts of higher reinsurance Best Estimates and more receivables due for less than 3 months are strongly compensated by the positive impacts of lower cash positions and less receivables due for more than 3 months.
- **Decrease in life underwriting risk** thanks to the increase of the interest rate curve compensated by the increase of future expenses and some minor model changes.
- Increase in health risk mainly due to the increase of premium risk in worker compensation branch and the increase of health SLT risk resulting from the higher inflation on annuities.
- Increase in non-life underwriting risk mainly due the increase of Catastrophe risk (impact of inflation on insured amounts) and the increase of reserve risk (mainly due to July 2021 floods) partly compensated by the new calibration of the USP.
- The operational risk slightly increases as a consequence of the higher Non-Life Best Estimates partly compensated by the decrease of Life Best Estimates. **Diversification has a higher impact** following the increase of both Non-Life and health SCRs.
- The loss absorbing capacity of technical provisions slightly increased in line with the increase of the profit sharing best estimate.
- The loss absorbing capacity of deferred taxes is still null.

DECEMBER 2019 DECEMBER 2020

SENSITIVITIES BASED ON SOLVENCY II FIGURES AT END DECEMBER 2019 AND END DECEMBER 2020

The solvency level is primarily sensitive to the evolution of credit spreads on government bonds

• An increase in **govies spreads** has a negative impact on Ethias' solvency because of the large part of government bonds in the asset portfolio, partly mitigated by an increase in the volatility adjustment that reduces the best estimate of technical provisions.

The solvency ratio is also sensitive, to a lesser extent, to other factors

- **Equities:** the sensitivity of a downward shock is lower at end 2020 compared to end 2019 despite the evolution of the investment portfolio towards more equity, as we benefit from more eligible DTAs to cover the SCR - in December 2019, the eligibility limit was reached.
- A decline in **interest rates** affects negatively the solvency ratio. The downward sensitivity has slightly increased due to lower interest rates at end 2020 (volume effect) and the maturity of interest-linked derivatives.
- **Real estate:** the impact of a downward shock is moderate given the relatively small exposure of this asset category in the investment portfolio
- **Ultimate forward rate** (UFR): the EIOPA will gradually lower the value of this technical parameter over time from 3,75% at end December 2020 to 3,50% with a maximum decrease of 0,15% per year. The impact is limited.
- On the contrary, higher **corporate spreads** lead to an improvement of the solvency thanks to the overcompensating effect of the volatility adjustment on the best estimate of technical provisions.

Life mathematical reserves increased over 2021 (+3,87%).

In guaranteed rate products:

- Retail life reserves decreased by 3,5%. On the one hand, existing reserves grow with the capitalization at the guaranteed rate, but on the other hand there is no new business in savings products, hence reserves are naturally decreasing over time.
- Life reserves in public and corporate (+1,8%) increase both in the first pillar and in the second pillar.

In unit linked :

- Reserves in public and corporate increased by 19,2%

The average guaranteed rate decreased from 1,60% to 1,47%.

3 JUNE 2021 : FITCH UPGRADES ETHIAS' IFS FROM 'A-' TO 'A' AND REVIEWS THE OUTLOOK FROM STABLE TO POSITIVE

The upgrade reflects Fitch's view that Ethias has consolidated its very strong capitalisation, its low leverage and strong operating performance since it completed a multi-year action plan in 2018. The ratings actions also consider the **resilience** of these factors **during the** coronavirus pandemic. Ethias' ratings also reflect a strong business profile.

The Positive Outlook reflects Fitch's view that the group could achieve a combined ratio sustainably below 95%, while maintaining its very strong capitalisation and low leverage over the next 12 to 24 months.

Our assessment of capitalisation takes into consideration that Ethias' Prism Factor-Based Model (FBM) score remained "Extremely Strong" at end-2020, well in excess of the 'A' benchmark.
